

ZERO SWING EXCAVATOR TB28FR

Machine Weight: 3,095kg (cabin)

Features

- 1 A compact and truly innovative design enables the TB28FR to efficiently operate in confined areas too narrow for conventional excavators.
- 2 A unique adjustable offset boom system combined with short tail swing radius allows the TB28FR to slew 360 degrees within the excavators track width.
- 3 The TB28FR incorporates a comparably low center of gravity through the location of the excavators heavier components within the lowest possible portions of the machines frame.
The excavator is designed with the stability and craning capacities of a conventional machine plus the ability to work in exceptionally confined areas.

TAKEUCHI

● OPERATING RANGE:mm

The adjustable one piece offset boom system found on the TB28FR allows for maximum unobstructed digging depths and fast cycle times even when positioned in the fully offset position. Competitive "Zero swing machines" are equipped with cumbersome, multi-part, high maintenance two-piece knuckle boom systems which greatly restrict digging depths when operated in the offset position.

The excavators spacious operators compartment with large comfortable seat provides for hours of fatigue free operation.

When the excavators adjustable boom is placed in the fully offset position the operator may position himself close to the trench for unobstructed visibility and control.
